12. Troubleshooting and glossary
13. Illustrated step-by-step walkthroughs

1. About MicroJobs

MicroJobs connects people looking for work with employers posting opportunities across the Philippines. Workers can search jobs, build a profile, submit applications, communicate with employers, and receive job payments into a worker wallet. Employers can fund job listings, review applications, send offers, hire workers, and approve submitted work.

The landing page introduces the platform and shows job listings. Its three informational cards explain how to build a profile, receive personal job matches, and build trust through verification.

Account or visitor	Main activities
Visitor	Explore the landing page and browse public job search. Sign in when saving or applying.
Worker	Find jobs, save listings, apply, respond to offers, submit finished work, and manage earnings.
Employer	Post funded jobs, manage applications, hire workers, approve work, and manage employer funds.
Employer and worker	Use both work and hiring features through the available account views.
Administrative staff	Perform the tasks permitted by their assigned staff role.

What you need

- An internet connection and a current web browser.
- An email address you can access for verification and recovery.
- A Philippine mobile number when completing phone verification.
- A profile photo before applying for jobs or posting a job.
- For full verification, a valid government ID and a proof-of-address document.

This manual uses English web interface labels. Filipino labels are available. The separate native mobile application has its own navigation and layout; the web sidebar and search-band instructions describe the browser version.

2. Getting started

2.1 Create an account

1. Open MicroJobs and select the registration option.
2. Choose **Worker**, **Employer**, or **I want to do both**.
3. Enter your full name, email address, and Philippine phone number.
4. Create and confirm your password. It must have at least eight characters, including an uppercase letter, a lowercase letter, a number, and a special character.
5. Review the Terms and Conditions and Privacy Policy, then select the agreement checkbox.
6. Select **Create Account**.

7. Complete the email verification instructions. If a code expires, request a new code using the available resend action.
8. Sign in and complete your profile.

Google registration or sign-in is available when that service is configured. Follow the account-selection and verification steps shown on screen.

2.2 Sign in

1. Open **Sign In** and enter your email address and password.
2. Use the eye control if you need to check the password you typed.
3. Submit the form and complete the verification method requested by the system, such as an email code or enabled multi-factor authentication.
4. If your account has both roles, use the available account-view controls to access worker or employer features.

A password error appears with the password field. Correct the field and try again. **Remember me** affects the session behavior; it does not remove verification requirements.

2.3 Recover a forgotten password

1. Select **Forgot Password?** on the sign-in page.
2. Enter the email address used by your account and request a recovery code.
3. Enter the six-digit code and verify it.
4. Enter and confirm a new password that meets the displayed rules.
5. Complete the reset and return to sign-in.

3. Navigation and language

Desktop navigation

The sidebar contains the pages available to your account. Worker navigation includes **Find Jobs**, **Applied Jobs**, **Saved Jobs**, **Messages**, **E-Wallet**, **Notifications**, **Support**, and **Settings**.

Use the round chevron button beside the MicroJobs logo to hide the sidebar. It slides away completely, giving the page the full available width. The system remembers the hidden state after a refresh.

On **Find Jobs**, the top dashboard navbar is hidden. When the sidebar is hidden, use the menu button beside **Job search** to reopen it. On other dashboard pages, use the menu control in the top navbar.

Phone and tablet navigation

Use the menu button to open the navigation drawer. Select a page to navigate. Close the drawer using its close control or the surrounding backdrop; keyboard users can press **Escape**. Bottom navigation also appears where supported.

Change the interface language

Open **Settings** and use the **Language** selector near the page heading. Choose **English (US)** or **Filipino**. Some content, including user-entered job descriptions, is not translated automatically.

4. Profile and verification

4.1 Build your profile

1. Open **Profile** to review your public-facing information.
2. Open **Settings** → **Account** to update the available profile fields.
3. Add a clear profile photo. This is required before applying or posting.
4. Add relevant skills, descriptions, work experience, and location information.
5. Add a résumé, internships, certificates, or experience media using the available controls.
6. Save your changes and review your profile.

Use accurate information. Skills, experience, preferred categories, and matching preferences contribute to job recommendations. Your profile location can affect the order of nationwide results; it does not permanently limit you to that city.

4.2 Complete verification

Open **Settings** → **Security & Privacy** → **Verification**. The system tracks four checks:

Check	What to do
Email address	Complete email verification.
Phone number	Save your phone number, request an SMS code, and enter the code.
Government ID	Follow the available ID-scanning or upload process and submit a readable valid document.
Proof of address	Upload the requested recent document, such as a utility bill or bank statement.

Document checks may remain **In review** until processed. If a document is rejected, read the reason, correct the problem, and submit a replacement.

The blue seal with a white check indicates completion of all four verification checks. A profile photo alone does not produce this badge. The badge describes verification status; it does not promise that a particular person will hire you or that an opportunity matches your needs.

5. Finding and saving jobs

5.1 Run a job search

1. Open **Find Jobs**, or browse the public job-search page from the landing page.
2. Enter a job title or keyword in the first white input.
3. Use the location input to select or type a city or province. You can use the suggestions or enter free text.
4. Select **Search**, or press **Enter** in a search field.
5. Review the results and open a job to see its details.

The initial location is **Nationwide**. Leave the location blank to search across the country. For example, enter `delivery` and `Cebu City`, then select **Search** to apply those fields together.

Typing prepares a search; it does not immediately change the results. Clearing the location also prepares a nationwide search. Select **Search** to apply that change. Existing filters remain selected when you submit a search.

Reloading the page or using browser **Back** and **Forward** restores the applied keyword and location from the URL. Changing a filter does not discard text you have typed but have not submitted.

The search is based on text matching. Use recognizable job titles or keywords; it is not a conversational or semantic search assistant.

5.2 Use filters and sorting

The filter controls are inside the blue search band:

Control	Purpose
Pay	Set a minimum pay amount.
Job type	Select one or more available opportunity types.
Category	Narrow results to an available job category.
Listing time	Choose the displayed recent-listing period.
Few applicants (<10)	Show jobs with fewer than ten applicants.
Matching preferences	Edit preferences used for personal recommendations.

Open a filter, select a choice, and use its results action where shown. A filter count indicates how many filter groups are active. Use **Reset** inside a filter to clear that filter or **Clear all** to clear the filter selections. Clearing filters keeps the applied keyword and location and retains any unsubmitted search drafts.

Use the sorting control above the results for the available choices, including nearest, recent, salary, and applicant count. Promoted listings and verified-employer priority can still influence ordering.

5.3 View job details

On wide screens, selecting a job updates the detail pane beside the list. On smaller screens, the job opens on a details page. Review the description, location, minimum pay, opportunity type, requirements, deadline, and employer information before applying.

5.4 Save jobs

Use a job's heart control to save or remove it. Open **Saved Jobs** from the sidebar or the pale-blue heart shortcut in the search band.

A signed-out visitor selecting the Saved Jobs shortcut is sent to sign-in with Saved Jobs as the intended return destination. Saved jobs do not submit an application or reserve a position.

5.5 Personal recommendations

The **Recommended for you** section is separate from filtered search results. It uses your profile and matching preferences. If your profile has no meaningful matches, use **Complete your profile** to add useful information. Search filters do not restrict this recommendation section.

6. Applications, offers, and finished work

6.1 Apply for a job

1. Sign in to your worker view and add a profile photo if you have not done so.
2. Open the job details and review the opportunity.
3. Select the application action and provide the requested application information.
4. Submit the application once.
5. Open **Applied Jobs** to view the result and track progress.

The system prevents duplicate applications and applications to your own job. Saving a job and applying for a job are separate actions.

6.2 Track the application

Status	Meaning
Applied	Your application was submitted.
Shortlisted	The employer selected it for further consideration.
Interview Scheduled	An interview has been arranged.
Interviewed	The interview stage has been recorded.
Offer Sent	The employer has sent an offer for your response.
Hired	Hiring has been confirmed.
Rejected	The employer rejected the application.
Withdrawn	You withdrew the application.

Use the status filter and application details to review interviews, changes, and the timeline. When withdrawal is available, use the withdrawal action and confirm your decision.

6.3 Respond to an offer

Open the offer from **Applied Jobs** or its message card. Review the job and offered amount before accepting or rejecting. Acceptance records your response; the employer still confirms the hire. Track the application until it shows **Hired**.

6.4 Submit finished work

1. Complete the agreed work and discuss any deliverables with the employer.
2. Open the hired application in **Applied Jobs**.
3. Select **Submit finished work** when the action is available.
4. Wait for the employer's review.
5. If changes are requested, read the reason, complete the changes, and submit again.
6. Once the employer settles the submitted work, check your worker wallet for the payment.

Payment authorization alone does not add money to your worker wallet. The work must be submitted and settled. When the system makes you eligible for a review, use the review action to record your experience.

7. Employer job posting and hiring

7.1 Prepare and post a job

1. Open your employer view and add a profile photo.
2. Open **E-Wallet** and make sure you have enough employer funds.
3. Open **Post Job**.
4. Enter the title, description, location, category, opportunity type, minimum guaranteed pay per worker, deadline, and number of positions.
5. Add relevant skills, requirements, responsibilities, an image, and optional urgent or highlighted settings where available.
6. Review the costs and submit the listing.

Current posting costs are:

Total funding = pay per worker × positions + PHP 20 posting fee + optional PHP 50 highlight fee.

For example, PHP 500 for each of two workers requires PHP 1,020 without highlighting or PHP 1,070 with highlighting. Worker pay is secured separately from the posting and highlight fees. These fees are non-refundable under the implemented posting rules.

If the wallet balance is insufficient, top up the wallet and submit again. Current posting types include **Short-term**, **Side hustle**, and **Recruiting**; search also supports older listing types.

7.2 Manage listings

Open the employer jobs page to inspect and manage your own listings. Use the available edit, close, reopen, completion, cancellation, or deletion actions only after reviewing their confirmation and financial effects. Availability depends on job status, filled positions, and outstanding offers.

7.3 Review applications and hire

1. Open **Applications** and use the board or table view.
2. Select an application and inspect the worker's profile and submitted information.
3. Shortlist the applicant or record an interview using the available actions.
4. Send an offer and enter the agreed amount.
5. Wait for the worker to accept.
6. Confirm the hire and check the updated application and position count.

Offers reserve capacity. A negotiated amount above the original pay can require additional secured funds. Keep discussions and offer responses associated with the correct job.

7.4 Review and pay for work

Open the hired application after the worker submits finished work. Review the result. If a revision is needed, use the changes action and give a clear reason. Otherwise, use the available approval/settlement action to pay that worker from the secured job funds.

For jobs with multiple workers, each worker's work and payment are tracked separately. Check the individual application and transaction rather than assuming that one payment completes every position.

8. Messages and profiles

Open **Messages** or the **Messaging** launcher to view your conversations. Select a conversation, type a message, and send it. Job inquiry, offer, and settlement messages retain their job context.

Click the other person's name or avatar in a conversation header to view their profile. Staff support conversations do not provide this personal-profile shortcut.

Use the conversation menu for available actions such as archive, block, or delete. Deleting a conversation removes your copy; the other participant keeps their copy. Sent-message editing is limited to the system's short edit window, currently 30 seconds.

Offer and payment cards may include additional actions. Review the named job, amount, and current status before accepting an offer or confirming a settlement.

9. Wallets and payments

9.1 Understand balances

- **Employer balance:** available funds used to post and fund jobs.
- **Worker balance:** funds available in the worker wallet, including settled job earnings.
- **Escrow:** secured job funds held until an authorized payment or applicable refund.

An account with both roles has separate employer and worker balances. Select the correct account view when reviewing funds.

9.2 Top up

1. Open the relevant wallet or payment action.
2. Enter the amount and review the target balance and displayed total.
3. Continue to the configured provider's checkout.
4. Complete checkout and return to MicroJobs.
5. Check the wallet and transaction status for confirmation.

Available payment methods depend on the configured checkout provider. A browser return by itself is not proof of a completed top-up; check the transaction status before repeating a payment.

9.3 Withdraw funds

1. Open **E-Wallet** and select the withdrawal action.
2. Enter the amount and destination details, including institution, account name, and account number, as requested.
3. Review the details and submit.
4. Track the request in **Withdrawal History**.

Withdrawal states include **Requested**, **Approved**, **Rejected**, **Paid**, and **Cancelled**. A request reserves/deducts the requested available balance while it is processed. If the system allows cancellation, use **Cancel Withdrawal**. Do not treat **Approved** as **Paid**; the history records them separately.

9.4 Transactions, receipts, and settlement requests

Use the transaction history to inspect the amount, status, reference, date, and linked job or request. Where a receipt action is available, open or email the receipt.

QR settlement requests are tied to a specific payment context. Open or scan the request through the available action, verify the job and amount, and check the resulting status. An expired or already resolved request may no longer be payable.

10. Notifications, support, and account security

Notifications

Open **Notifications** or the available notification control. Review application, message, payment, and platform updates. Use the read controls to manage unread notifications and follow the linked item where provided.

Support

1. Open **Support**.
2. Create a ticket with a clear subject, category, and description.
3. Include the relevant job, application, or transaction reference.
4. Review your ticket and reply when staff request more information.

Support tickets can progress through open, in progress, waiting for user, resolved, and closed states. Provide enough detail for staff to identify the issue.

Settings and sign-out

Settings → **Account** manages profile information. **Security & Privacy** contains security, verification, and privacy controls. **Payments** contains the available payment settings.

Use security settings to change a password, manage sessions or trusted devices, and configure available multi-factor authentication. Follow the verification code prompts for password changes. If an account-deletion request is available, read its confirmation before submitting.

Use **Sign out** when finished, especially on a shared device.

11. Administrative staff guide

Staff accounts use the dedicated admin sign-in page. Their assigned permissions determine the visible pages and allowed actions.

Staff role	Typical responsibility
Superadmin	Overall administrative access and staff administration.

Staff role	Typical responsibility
Admin team	Staff and user administration, jobs, audit review, analytics, and support tasks permitted to the role.
Moderator	Verification review, moderation, and permitted user/job enforcement.
Finance team	Transactions, reconciliation, payout review, and financial disputes.
Analytics team	Analytics and permitted exports.
Support staff	Support tickets and permitted account assistance, such as unlocking or initiating recovery.

Common staff procedures

1. Open the appropriate queue: verification, support, payouts, moderation, jobs, or disputes.
2. Review the record, its current status, related information, and evidence.
3. Select an allowed action and enter the requested reason or notes.
4. Confirm the outcome and review the record's updated status.
5. Use audit logs or transaction references where your role permits them.

For payout requests, approval and marking a request paid are separate actions. Verification reviewers should record rejection reasons so users can correct documents. Support staff should keep internal notes separate from user-facing replies.

The **Backups** screen currently states that backups are not configured. It does not create or restore database backups. Operators must use their separately configured database/storage backup process.

12. Troubleshooting and glossary

Problem	Action
Password is rejected	Recheck the email and password, then use password recovery if needed. Read the field error.
Verification code is missing	Check the relevant email folder or phone reception, confirm the saved address/number, and use resend when available.
Code expired or too many attempts	Request a new code or wait for the displayed retry period.
Search results do not change while typing	Select **Search** or press **Enter** to submit both fields.
Clearing the city did not restore nationwide results	Submit the cleared location with **Search**.
Few or no results	Broaden the keyword, clear restrictive filters, and submit a nationwide location.
Profile photo is required	Add a photo in Settings before applying or posting.

Problem	Action
Job is already applied for	Check **Applied Jobs**; duplicate applications are not accepted.
Sidebar disappeared	On Find Jobs, use the menu beside **Job search**; on other pages, use the navbar menu.
Verification is pending	Open Verification to see which check is incomplete or awaiting review.
Payment is authorized but not received	Check whether work was submitted and the employer completed settlement.
Top-up or withdrawal is pending	Inspect transaction/request history and contact Support with its reference if needed.
Session ended	Sign in again. Ended or revoked sessions cannot continue using protected actions.
A service or document upload fails	Read the error, try again when appropriate, and provide the error and reference to Support.

Application: a worker's recorded interest in one job.
Offer: proposed job terms requiring the worker's response and hiring confirmation.
Escrow: secured job funding recorded separately from available wallet balances.
Settlement: releasing the agreed job amount to the worker balance after submitted work is approved for payment.
Withdrawal: a request to pay available wallet funds to the specified external destination.
Verified badge: the seal shown when email, phone, government ID, and proof-of-address checks are complete.

Documentation basis

This manual follows the current routes, interfaces, English labels, and server business rules in the repository. See System Specification for technical details and implementation references. Provider availability and production configuration must be confirmed for the deployed environment.

13. Illustrated step-by-step walkthroughs

The following screenshots show the current web interface using demonstration accounts and sample jobs captured on 13 October 2026. They do not show real customer information. Blue circles identify controls; the numbered table rows show the order of actions. Unmarked screenshots illustrate layouts and record states. Screens may require scrolling to reach controls outside the illustrated area.

Before a protected task, sign in with the required role. Before applying or posting, save a profile photo. These examples supplement the rules and troubleshooting in chapters 1–12.

13.1 Choose your account role

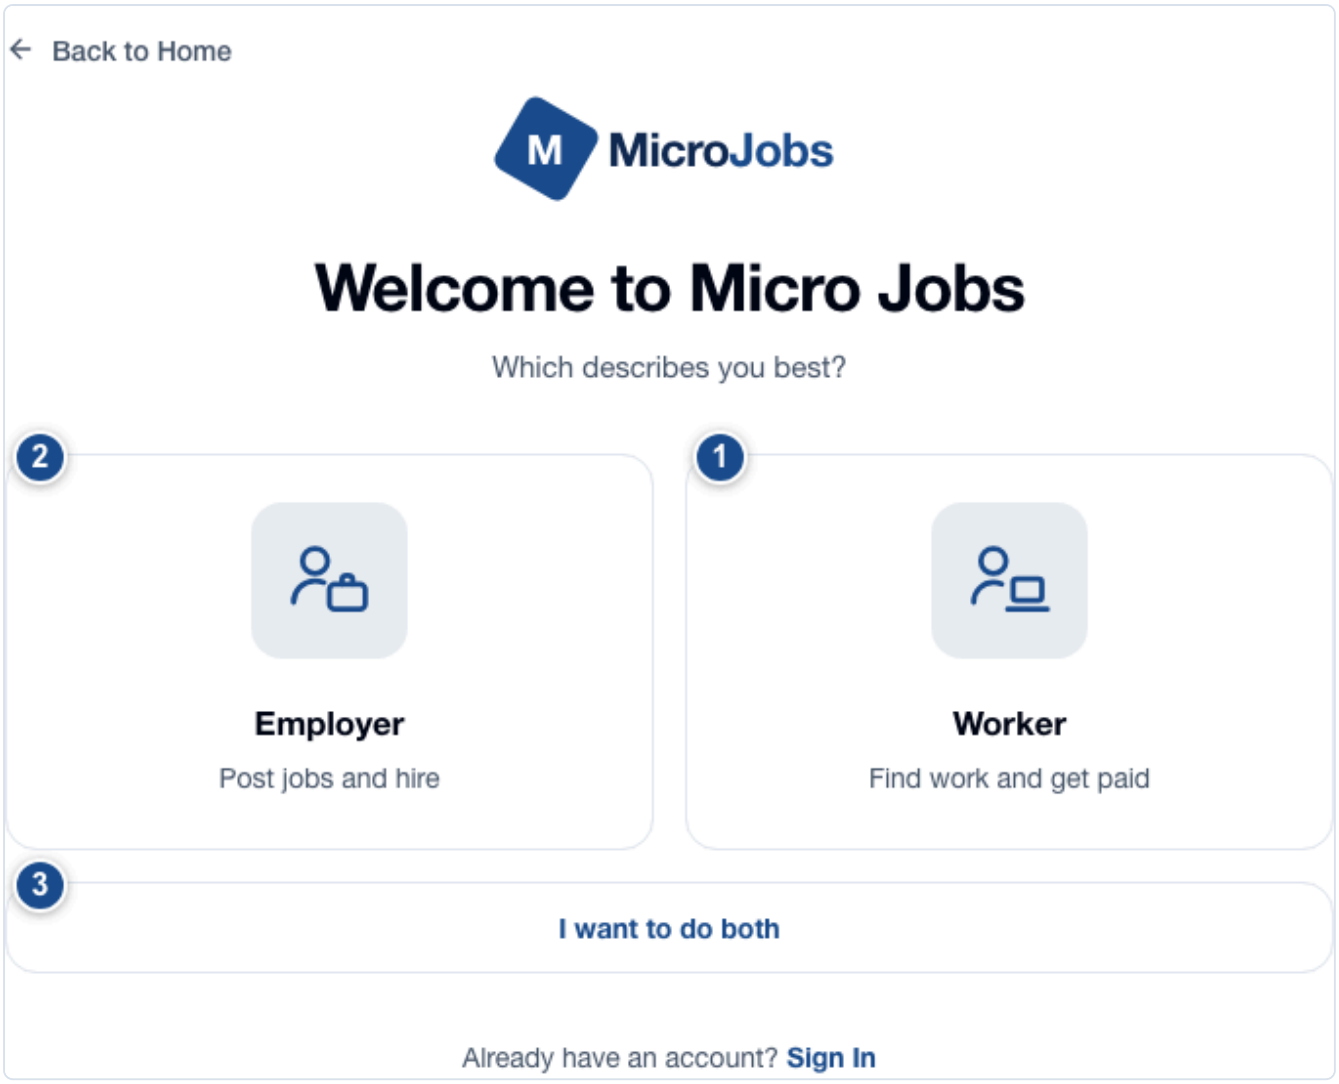

Figure 1. Marker 1: Worker; marker 2: Employer; marker 3: both roles.

Step	Action	Expected result
1	Open Sign Up and choose the role matching your needs.	The account-details form opens.
2	Check the selected-role description.	You can confirm whether you are registering to work, hire, or both.
3	Continue with your name and contact details.	The selected role remains associated with the registration.

13.2 Complete registration

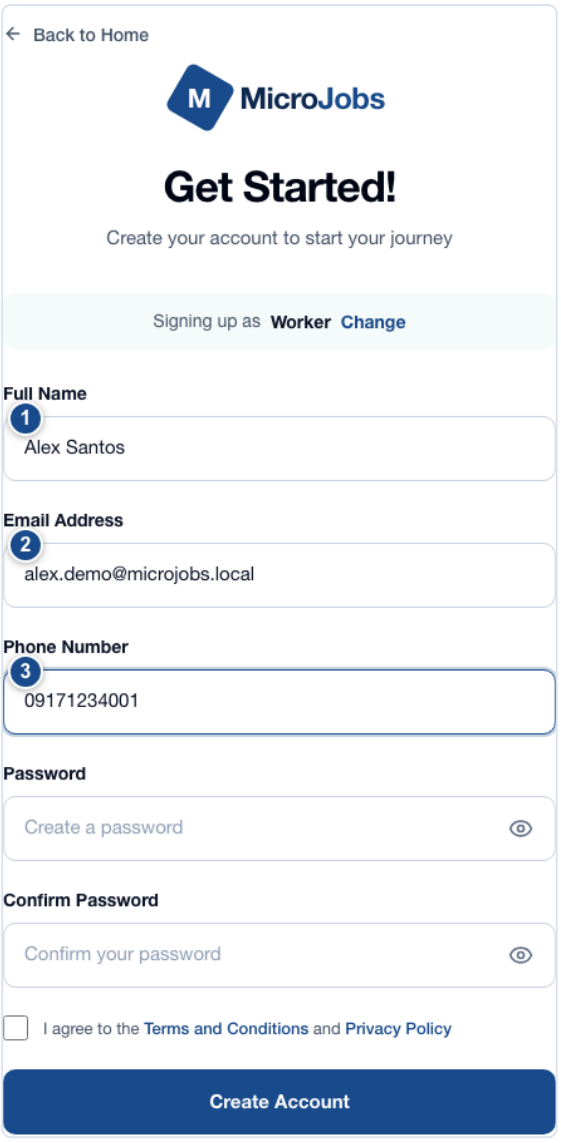

Figure 2. Marker 1: full name; marker 2: email; marker 3: Philippine phone number. Continue below these fields for passwords and agreement.

Step	Action	Expected result
1	Enter your own full name, email, and phone number.	The required contact fields are completed.
2	Create and confirm a strong password; review and accept the agreement.	The password rules and required agreement are satisfied.
3	Select Create Account and complete email verification.	The system validates the details and activates the verified account.

13.3 Sign in

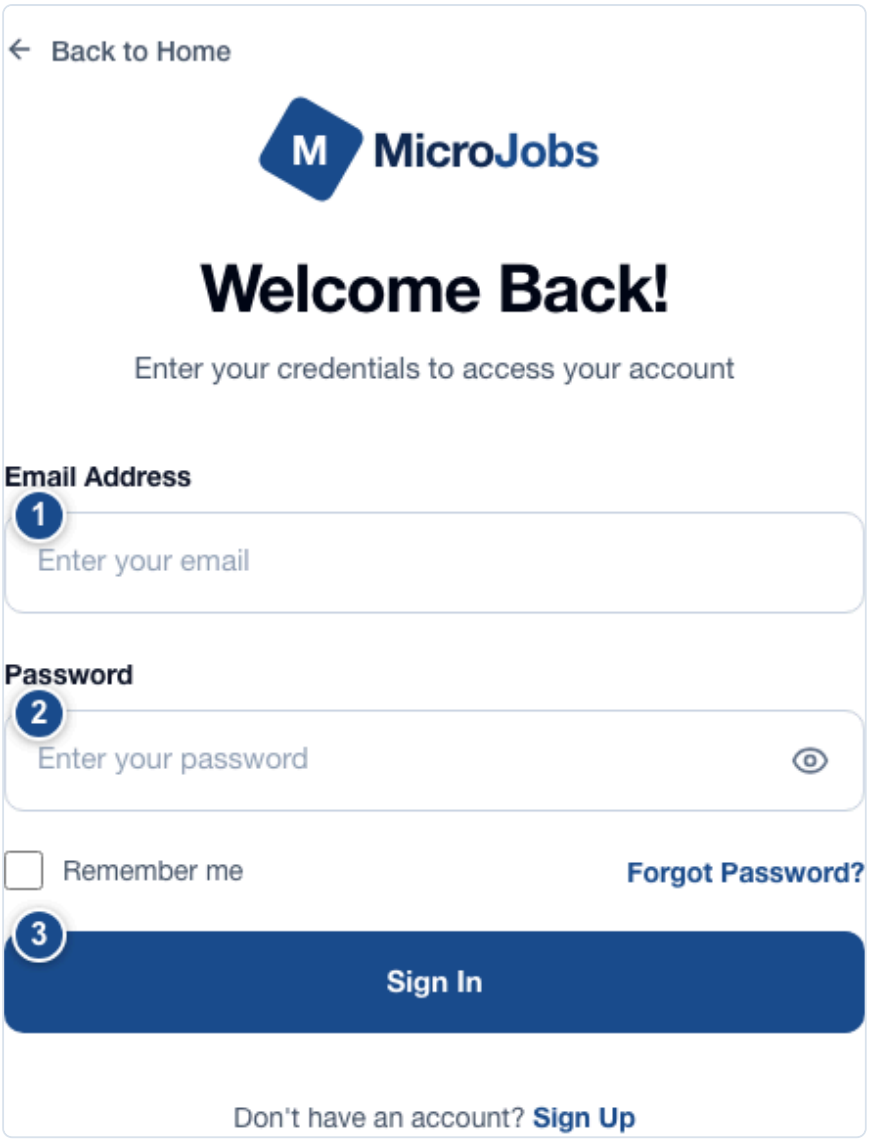

Figure 3. Marker 1: email; marker 2: password; marker 3: Sign In.

Step	Action	Expected result
1	Enter your account email and password.	The fields contain the credentials for your account.
2	Select Sign In.	A required challenge or an input error appears.
3	Complete the verification challenge shown by the system.	An authorized session opens the appropriate account view.

13.4 Build and verify your profile

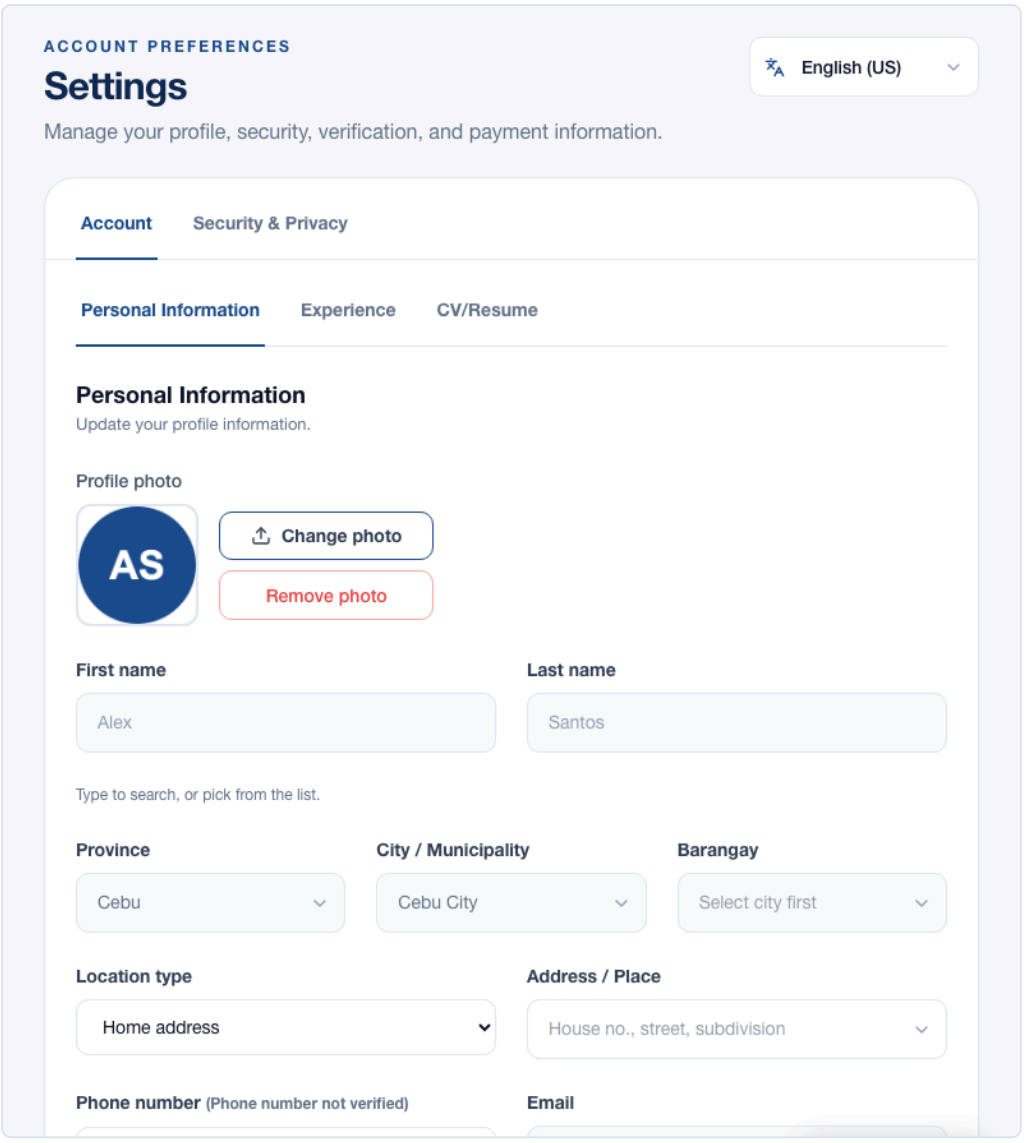

Figure 4. Account settings in the demonstration worker view.

Step	Action	Expected result
1	Open Settings and select Account.	Editable account/profile controls are shown.
2	Upload and save a profile photo.	The photo prerequisite for applying or posting is met.
3	Add your skills, experience, and relevant contact/location information.	Saved information appears in your profile and supports recommendations.

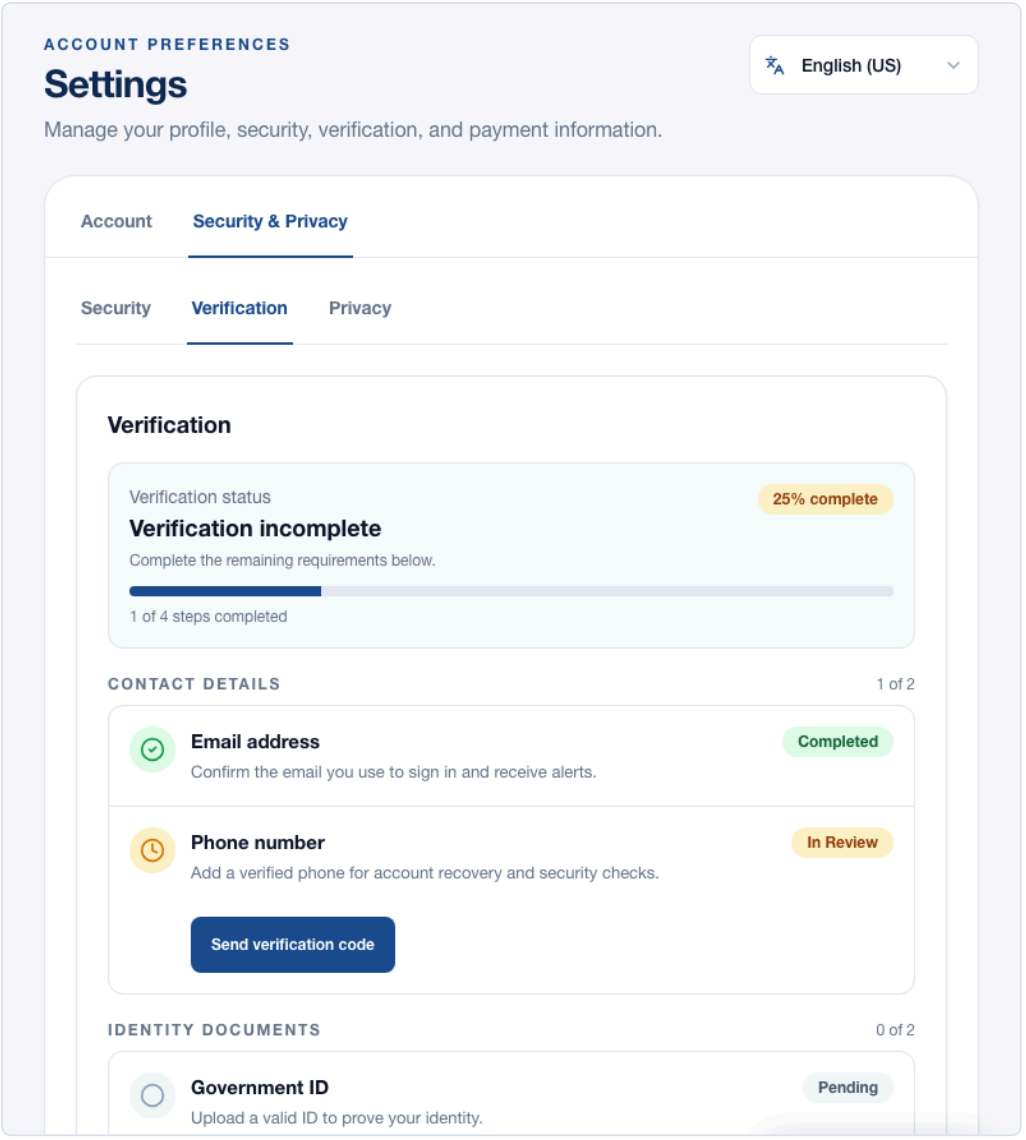

Figure 5. Verification lists the checks and their actual current states. The example account has incomplete checks.

Step	Action	Expected result
1	Open Security & Privacy → Verification.	Email, phone, government ID, and address checks appear.
2	Complete the available code or document actions.	Each check becomes complete or enters review as appropriate.
3	Correct rejected information and submit again.	A replacement can be reviewed; the seal appears only after all four checks are complete.

13.5 Use the sidebar and phone navigation

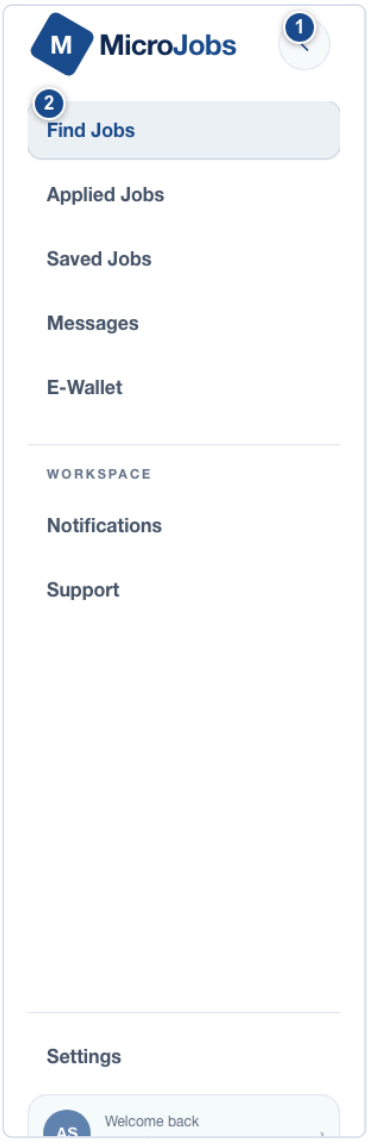

Figure 6. Marker 1: hide sidebar; marker 2: Find Jobs navigation link.

Step	Action	Expected result
1	Select the round chevron at marker 1.	The sidebar slides away completely.
2	On Find Jobs, use the menu beside Job search.	The full sidebar reopens.
3	Choose the required page link, such as marker 2.	That page opens and the active link is highlighted.

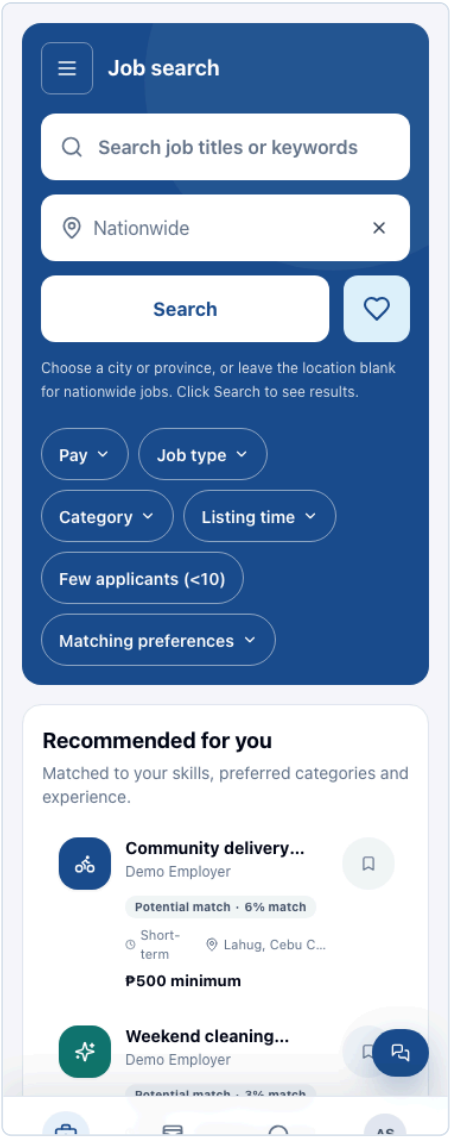

Figure 7. Phone inputs stack and the primary actions remain together.

Step	Action	Expected result
1	Open Find Jobs on a phone.	The search controls fit the narrow screen.
2	Use the menu to open navigation.	A drawer shows the available page links.
3	Select a page or close the drawer.	Navigation completes or focus returns to the opener.

13.6 Search, filter, and save jobs

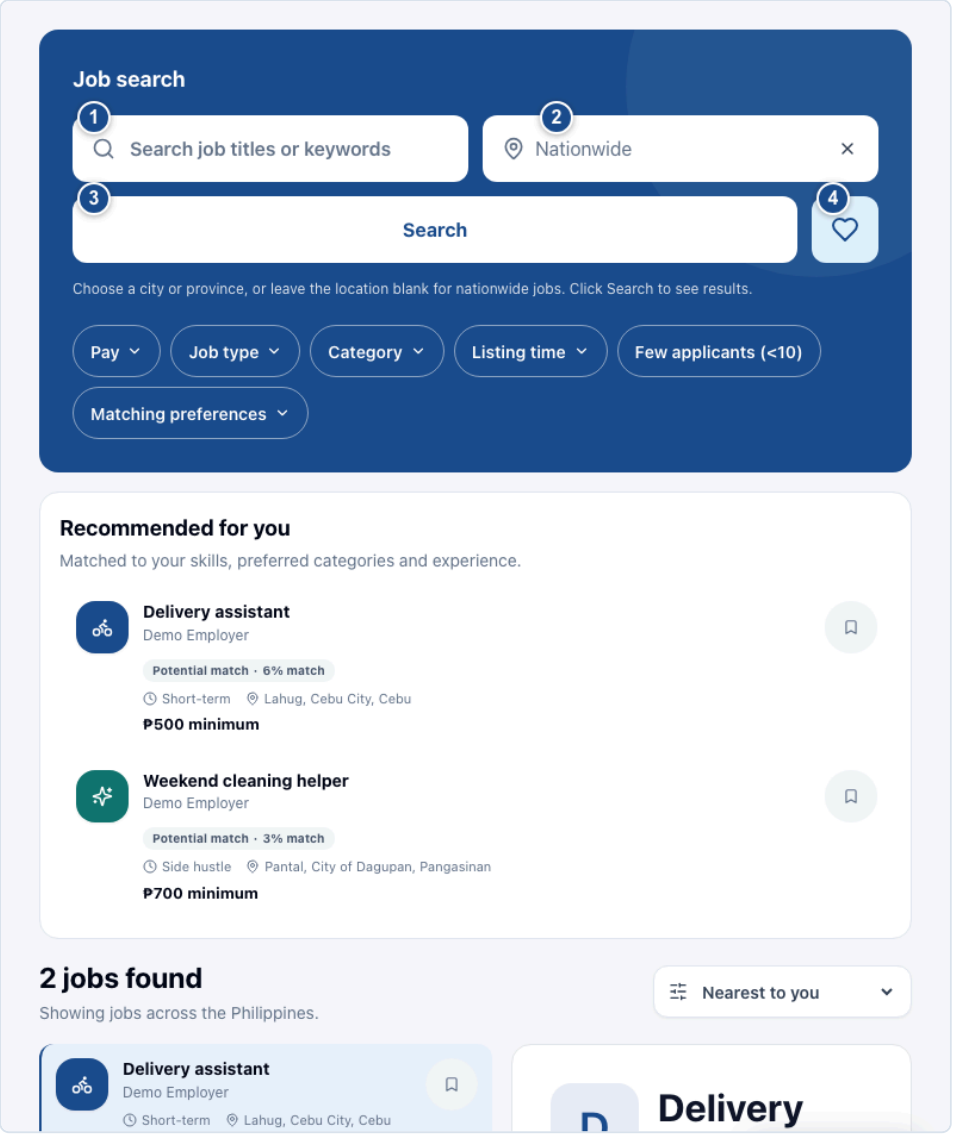

Figure 8. Marker 1: keyword; marker 2: location; marker 3: Search; marker 4: Saved Jobs.

Step	Action	Expected result
1	Type a job title or keyword at marker 1.	A draft is prepared; the existing results remain.
2	Select/type a city or province at marker 2, or leave it blank.	A selected-location or nationwide draft is prepared.
3	Select Search at marker 3 or press Enter.	Both fields apply together while filters remain selected.
4	Use a job's heart to save it, then open marker 4.	The saved listing is available through Saved Jobs after sign-in.

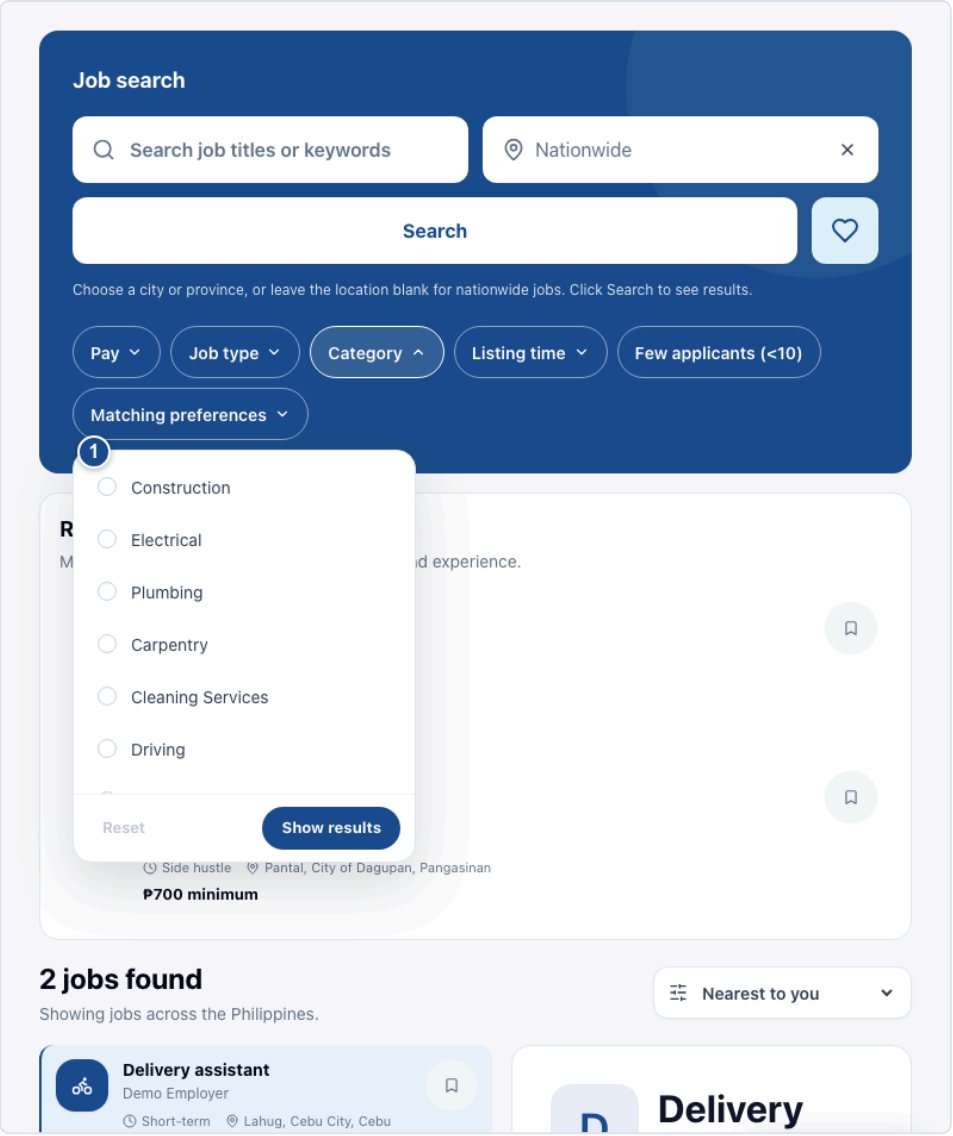

Figure 9. The white dropdown extends beyond the search band.

Step	Action	Expected result
1	Open the desired filter pill.	Its choices appear in a readable menu.
2	Select a choice and use Show results where provided.	The filter applies and its active count updates.
3	Use Reset or Clear all as needed.	Appropriate filters clear while search drafts are retained.

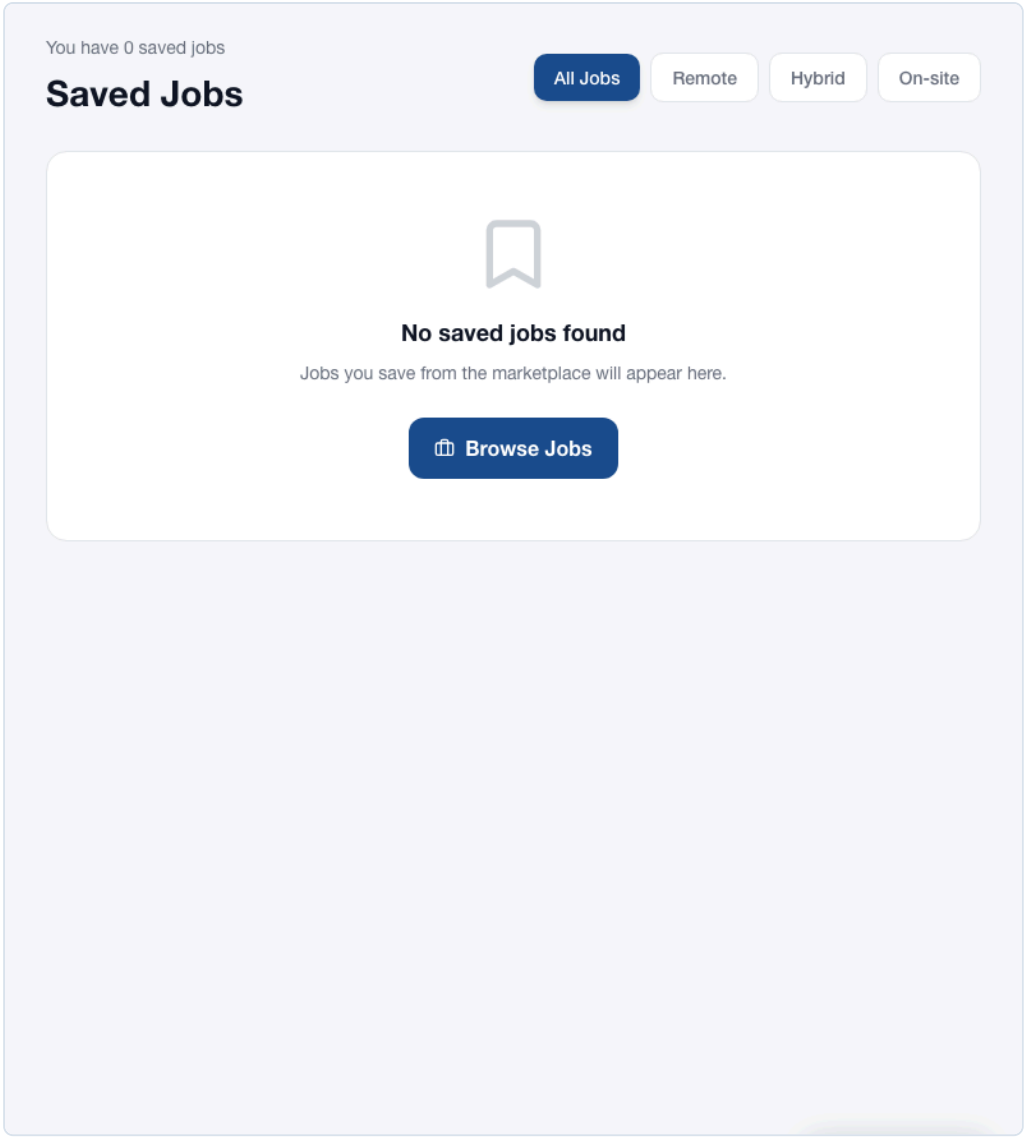

Figure 10. An account with no saved listings shows an explicit empty state; saving a listing supplies content for this page.

13.7 Read a job and apply

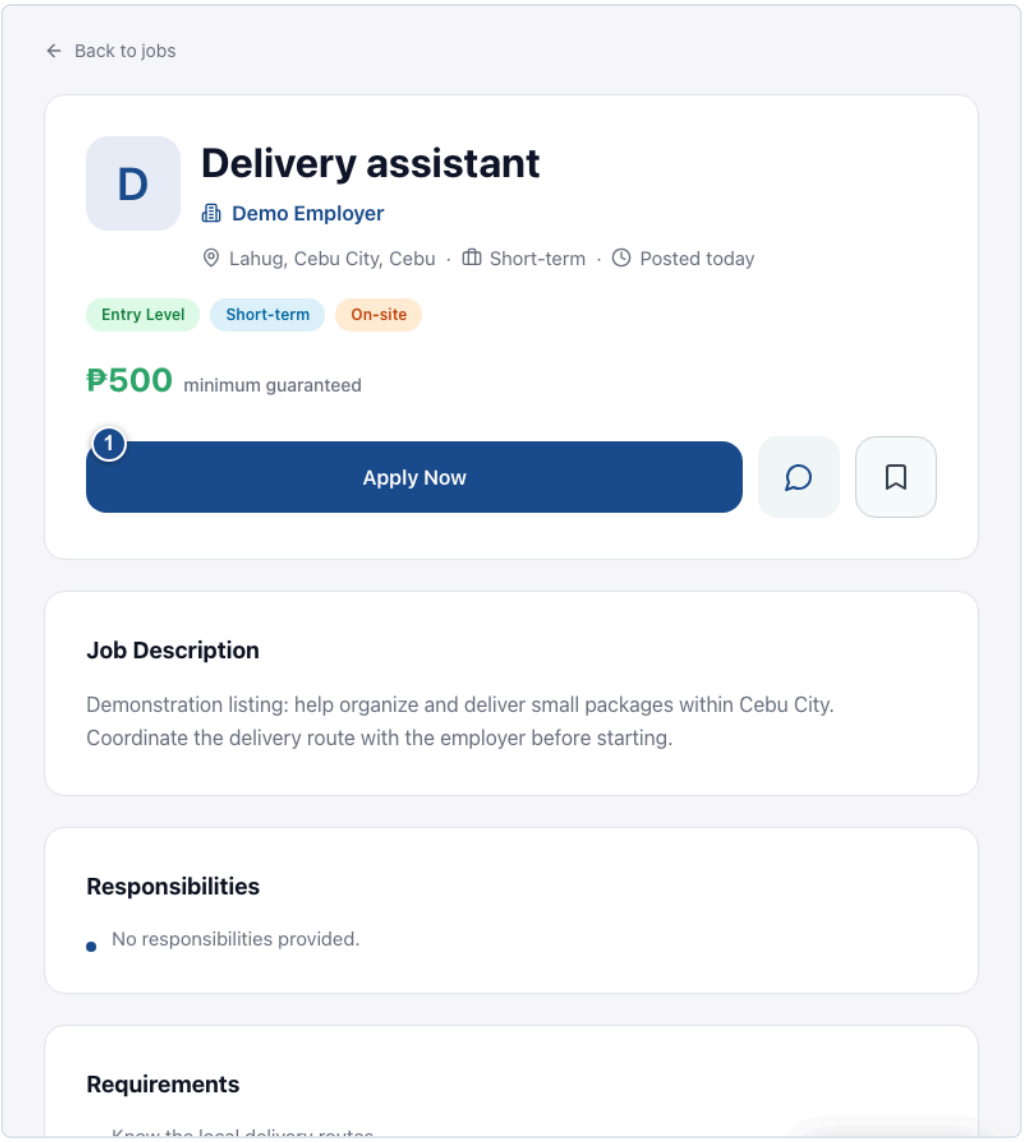

Figure 11. Read the job information before using Apply Now at marker 1.

Step	Action	Expected result
1	Open a search result and review the pay, place, deadline, and requirements.	You can assess the opportunity before applying.
2	Confirm that your profile photo is saved.	The profile prerequisite is met.
3	Select Apply Now once.	A successful application appears in Applied Jobs; duplicate/own-job applications are blocked.

13.8 Respond to an offer and submit finished work

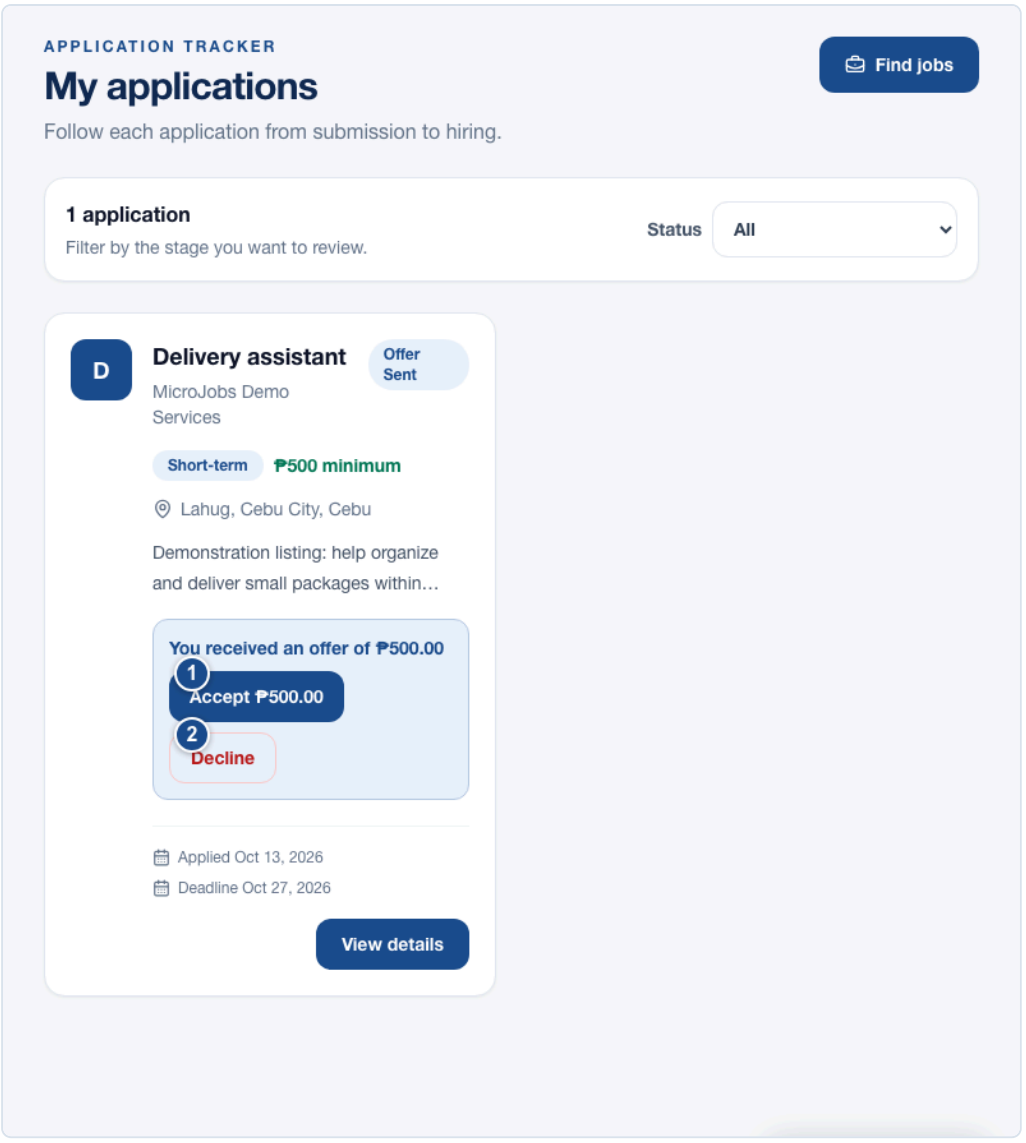

Figure 12. Marker 1: accept the displayed amount; marker 2: decline.

Step	Action	Expected result
1	Open the offer in Applied Jobs and read the job and amount.	The proposed terms are visible.
2	Accept or decline, then complete the confirmation.	Your response is recorded.
3	After acceptance, wait for employer confirmation.	Confirmed hiring changes the application to Hired.

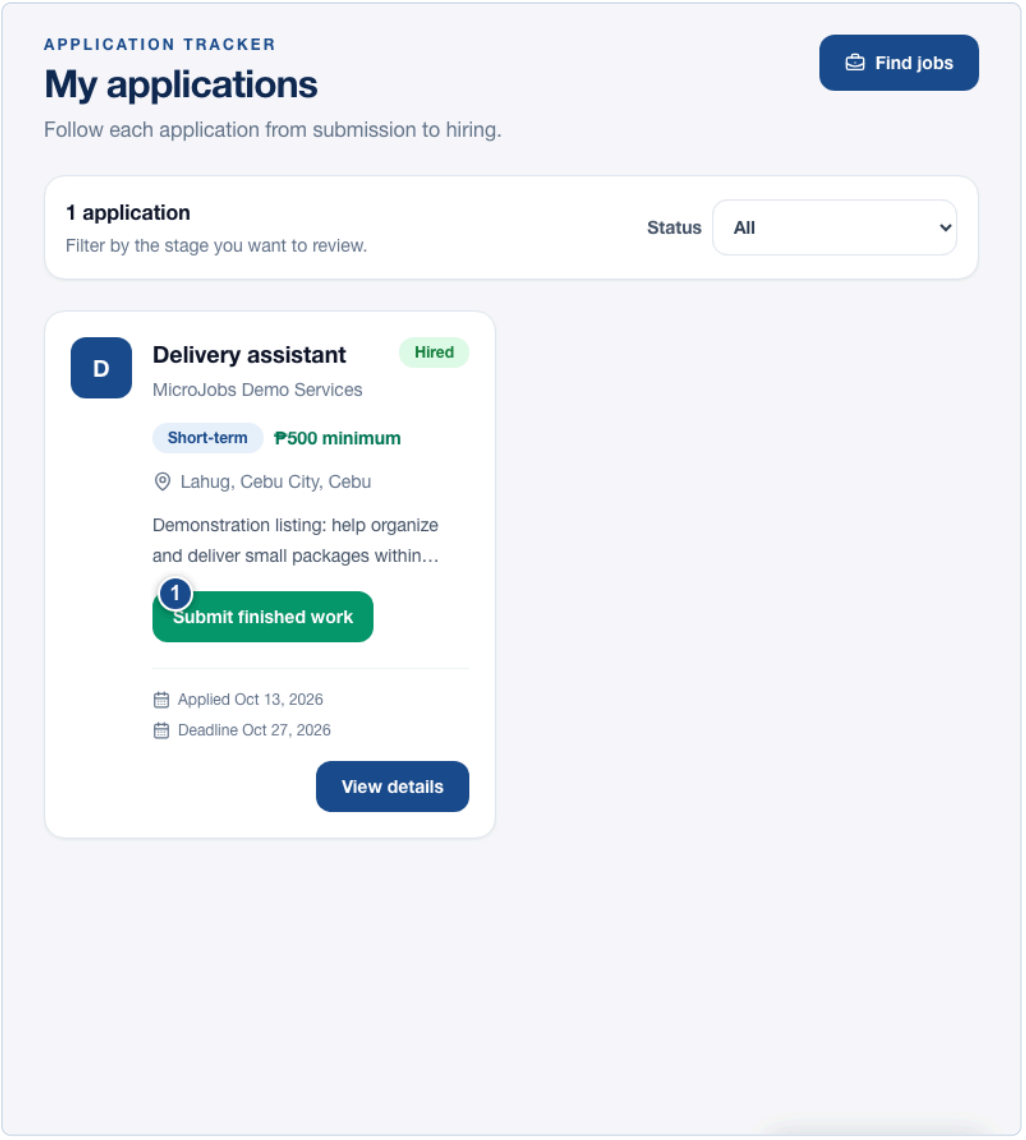

Figure 13. Marker 1: Submit finished work for a hired application.

Step	Action	Expected result
1	Finish the agreed work and open the hired application.	Submission is available in an eligible work state.
2	Select Submit finished work.	Work becomes Submitted and the employer is notified.
3	Review any changes requested, revise, and submit again if necessary.	After settlement, the work is completed/paid and the worker balance is credited.

13.9 Post a job through the four-stage wizard

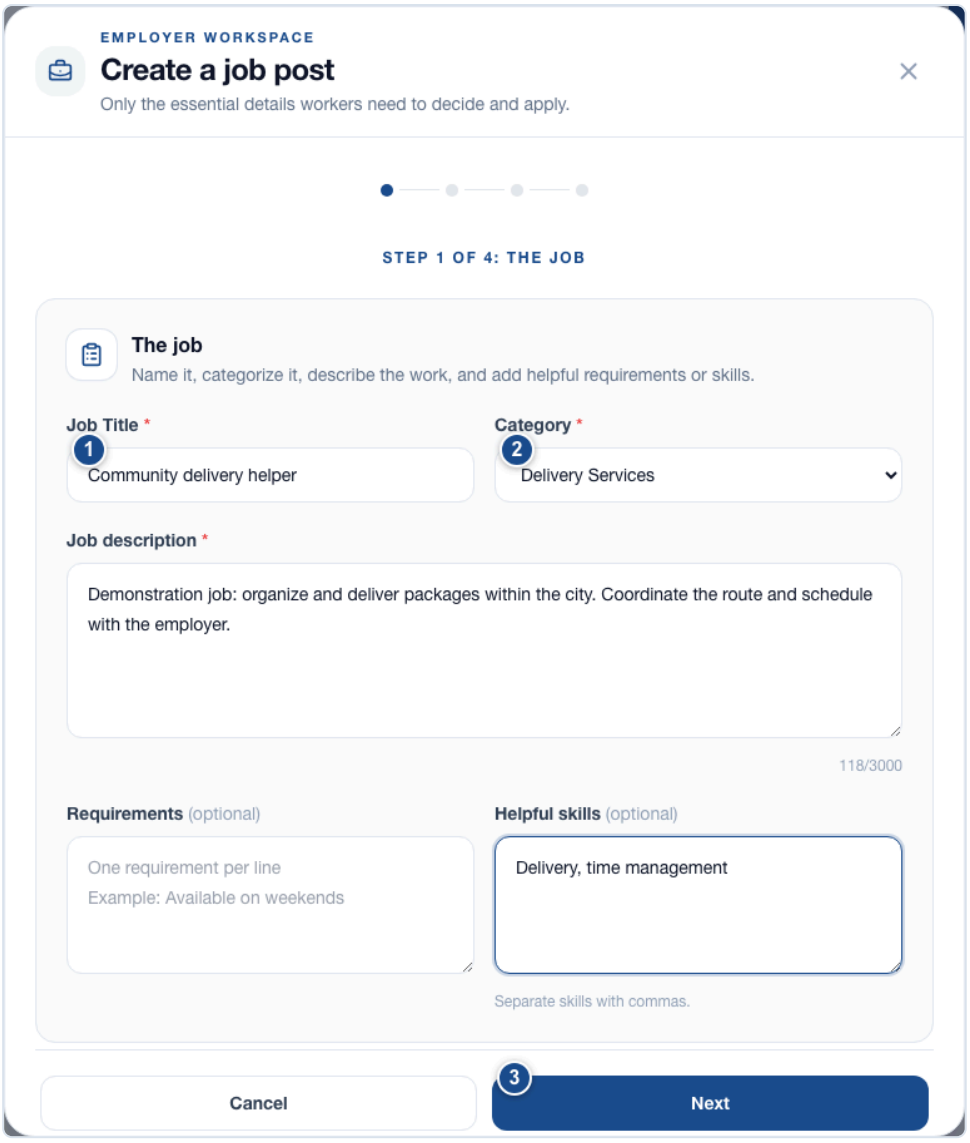

Figure 14. Marker 1: title; marker 2: category; marker 3: Next.

Step	Action	Expected result
1	Open the employer Post a Job page, then select its posting action.	The creation wizard opens at Job.
2	Enter a title, category, description, and optional skills/requirements.	Required job-content fields are ready.
3	Select Next.	Valid fields allow Where & when to open.

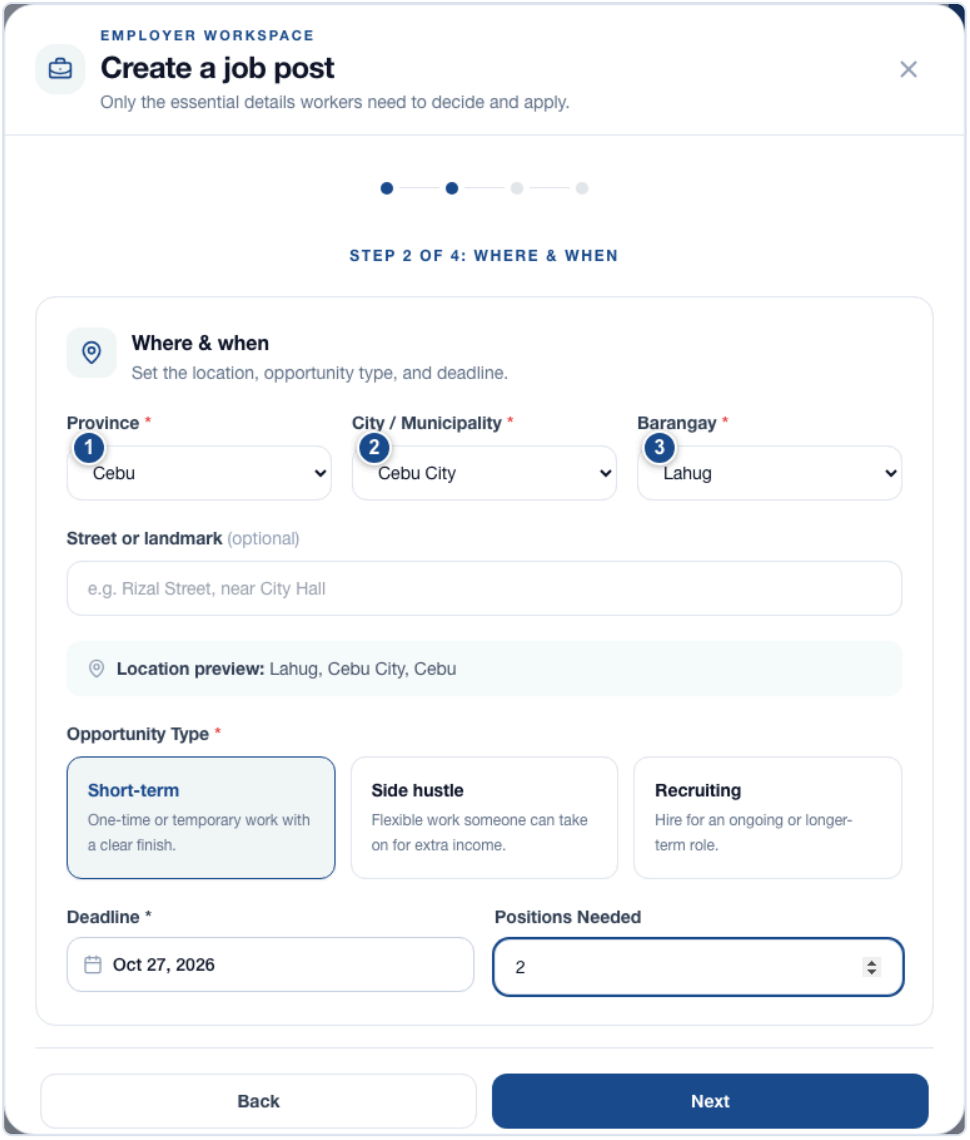

Figure 15. Marker 1: province; marker 2: city; marker 3: barangay. Continue within the wizard for type, deadline, and worker count.

Step	Action	Expected result
4	Select the province, city, and barangay; add an address if needed.	The location preview reflects the selected place.
5	Select the opportunity type, deadline, and number of workers.	Location and scheduling requirements are complete.
6	Select Next.	The Pay stage opens, or missing-field validation asks for corrections.

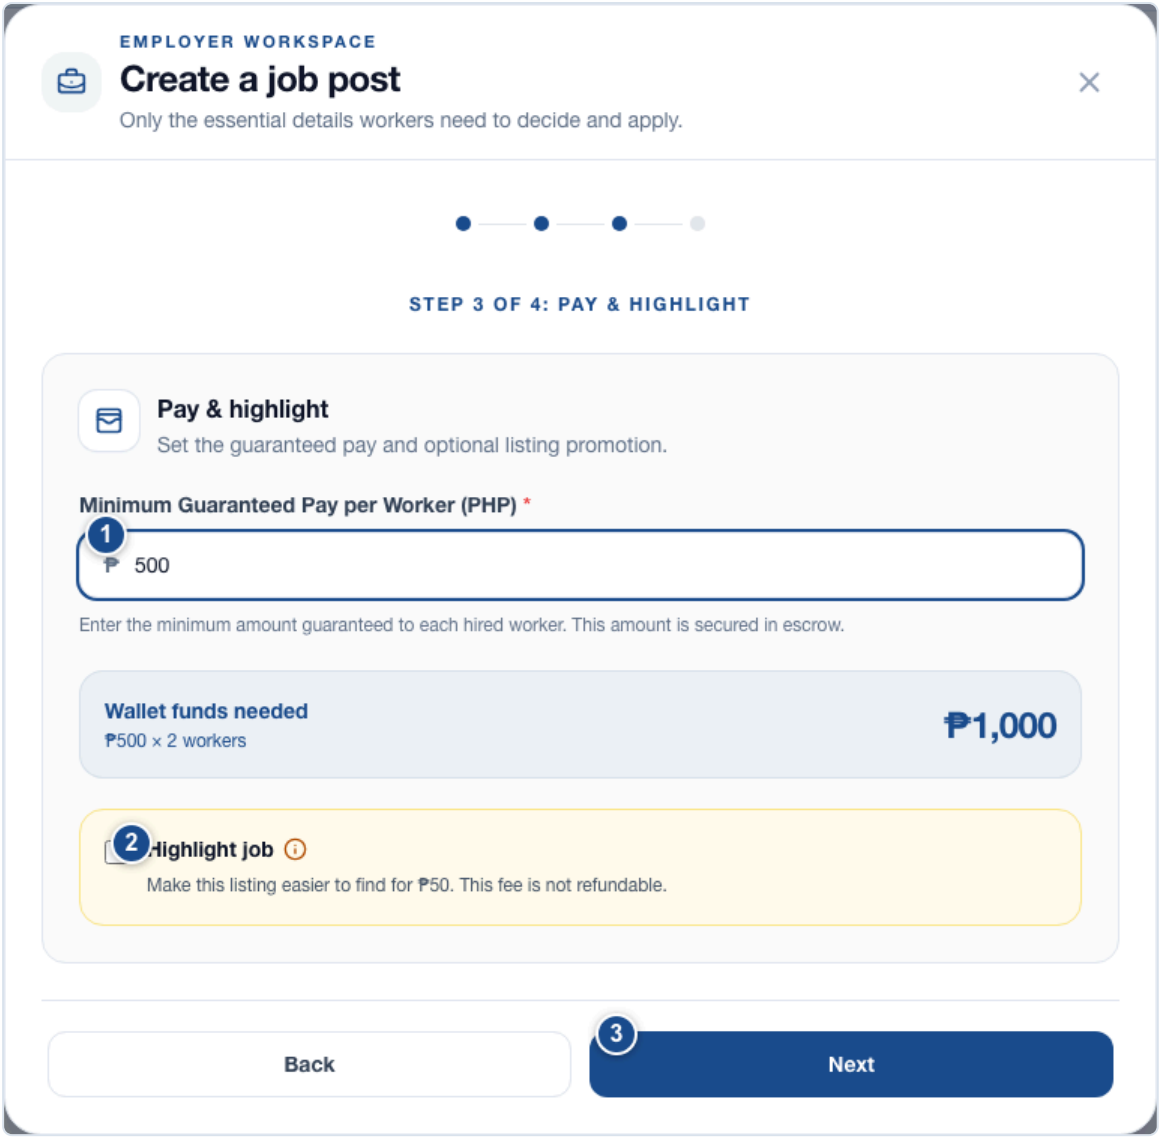

Figure 16. Marker 1: pay per worker; marker 2: optional highlight; marker 3: Next.

Step	Action	Expected result
7	Enter positive minimum guaranteed pay per worker.	Secured worker pay recalculates using the worker count.
8	Review the optional highlight and its separate fee.	Your chosen promotion is reflected in the charges.
9	Select Next.	Review opens with the entered values.

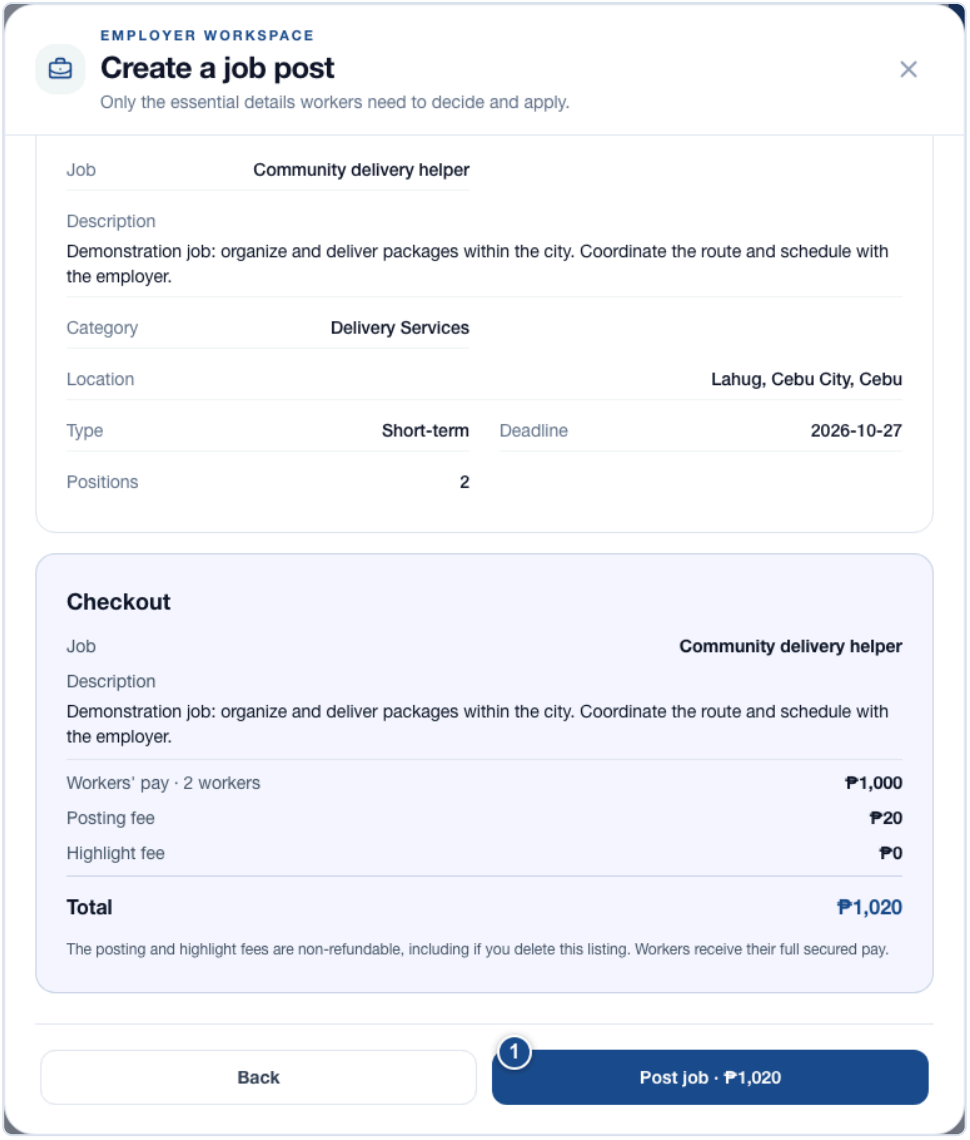

Figure 17. Marker 1: priced posting action. Example: PHP 500 × two workers + PHP 20 = PHP 1,020 without highlighting.

Step	Action	Expected result
10	Check the content, location, worker count, and itemized total.	You can confirm what will be posted and funded.
11	Use Back to correct a value, or select the priced posting action.	The server checks the listing and available funds.
12	Review the returned listing and wallet history.	A successful job is stored and funded; insufficient funds require a top-up.

13.10 Review applications as an employer

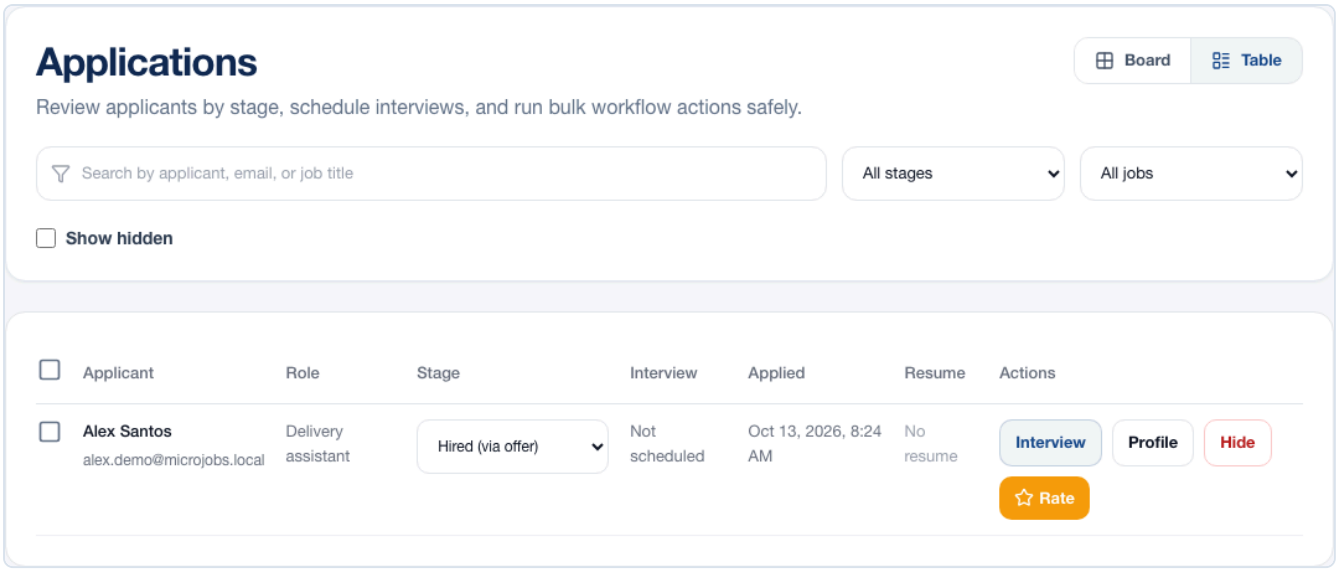

Figure 18. Employer application table for the demonstration delivery job after settlement.

Step	Action	Expected result
1	Open Applications and select a record from the board or table.	The applicant and job context are available for review.
2	Use permitted interview/offer actions and confirm an accepted hire.	Application and offer states update separately.
3	Review submitted work, request changes, or settle it.	That worker's work/payment states change; settlement credits their worker balance.

13.11 Use messages and view another profile

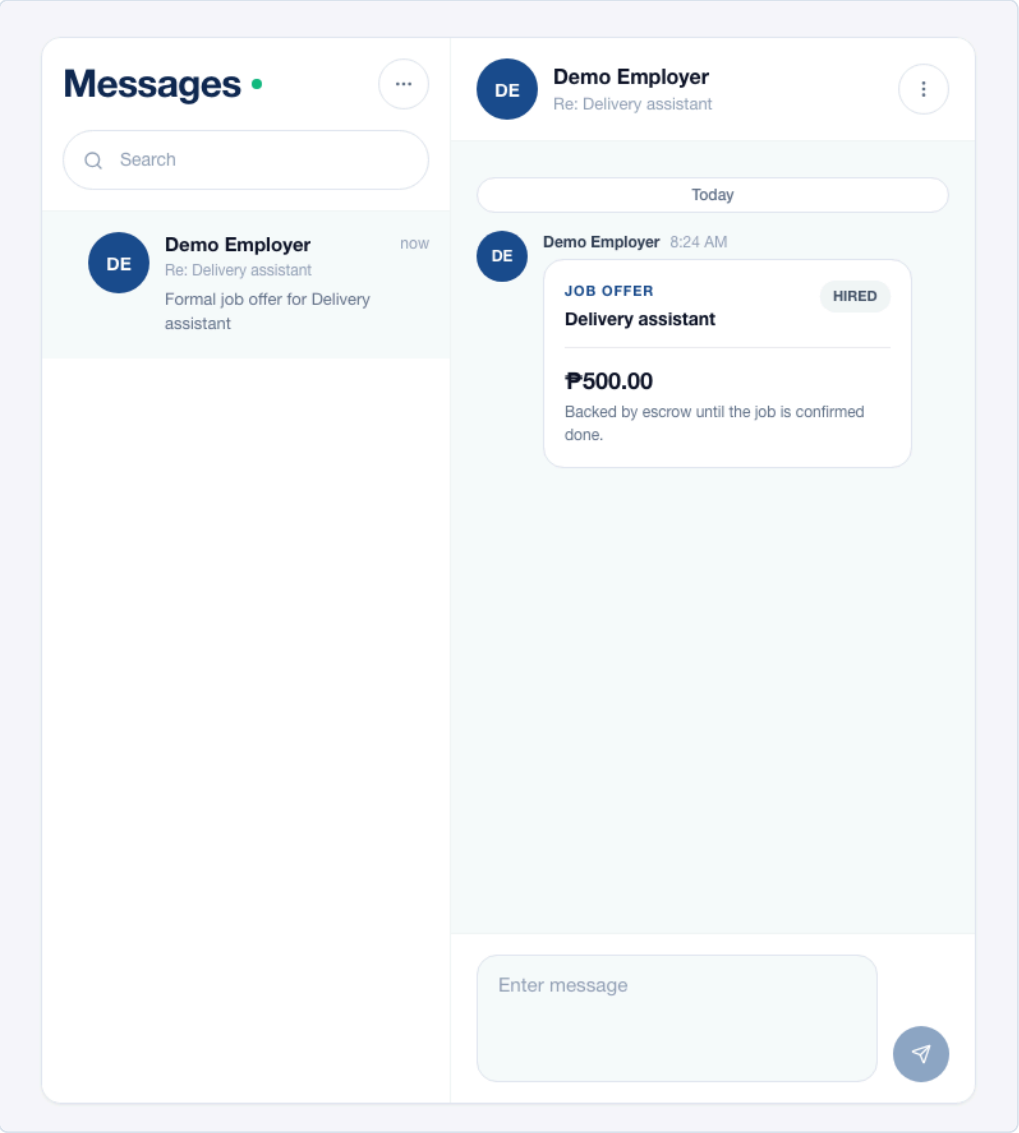

Figure 19. Conversation header and messages for the demonstration delivery job.

Step	Action	Expected result
1	Open Messages and select the relevant conversation.	The participant and job context appear.
2	Type and send a message.	The conversation records it.
3	Select the other participant's name or avatar in the header.	Their profile opens; staff support participants omit this shortcut.

13.12 Check earnings and request a withdrawal

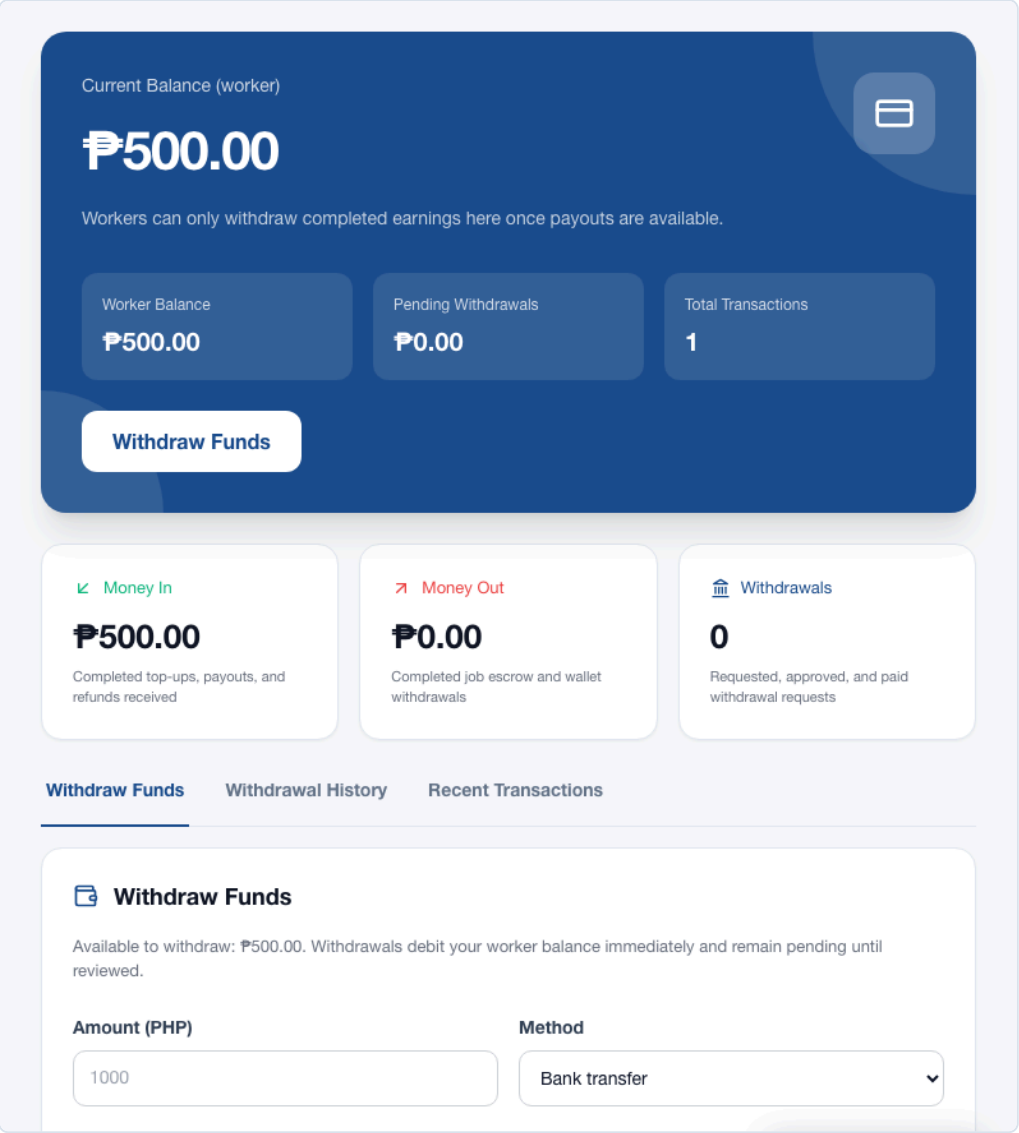

Figure 20. The demonstration account received a PHP 500 job settlement into its worker balance.

Step	Action	Expected result
1	Open E-Wallet in the worker view.	Available worker funds appear separately from employer funds.
2	Inspect Transactions and the relevant reference/status.	You can confirm the recorded settlement amount.
3	Enter the withdrawal amount and destination, submit, and inspect Withdrawal History.	A separate withdrawal request records its review/payment state.

13.13 Ask for support

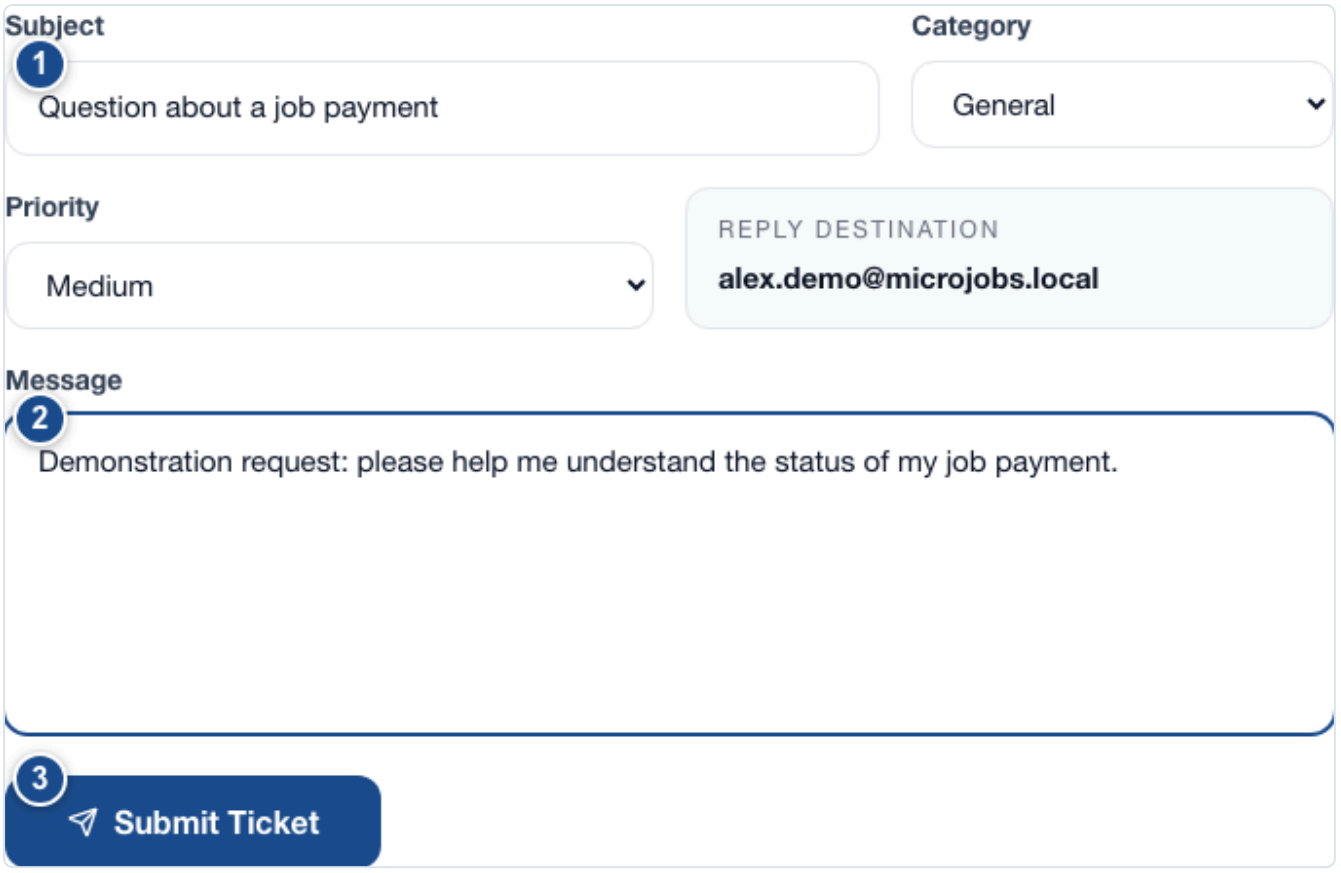

Figure 21. Ticket form: marker 1 is the subject, marker 2 is the description, and marker 3 submits the ticket.

Step	Action	Expected result
1	Open Support and select the ticket-creation action.	The support form becomes available.
2	Enter a clear subject, category, description, and relevant record reference.	Staff have enough context to investigate.
3	Submit and follow the ticket; reply when staff request information.	The ticket and its replies can be tracked.

13.14 Review a payout as authorized staff

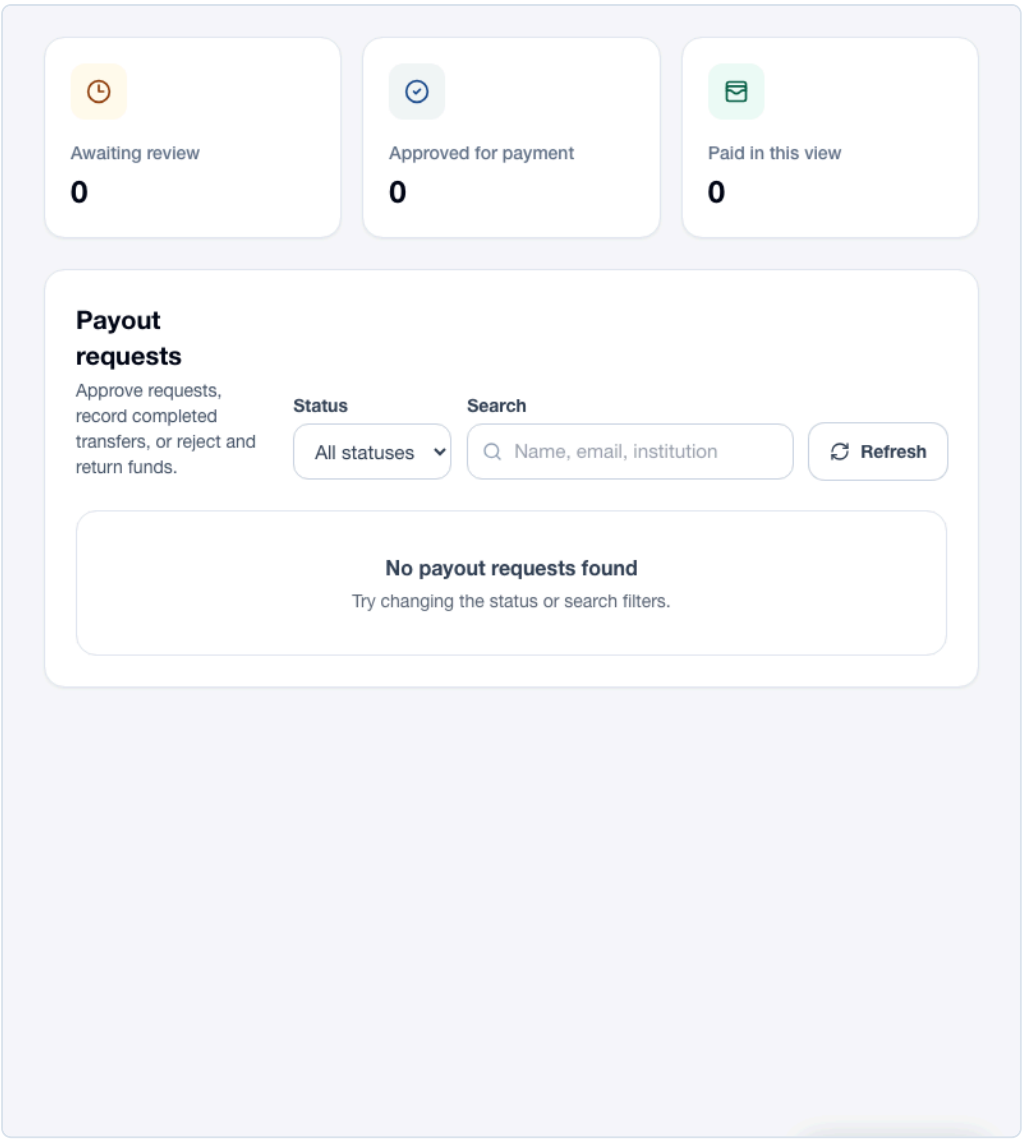

Figure 22. The demonstration queue is empty. The screenshot starts with an already authorized staff session.

Step	Action	Expected result
1	Open Payouts with an authorized staff session.	The permission-controlled queue appears.
2	Select an available request and check amount, destination, and state.	The record provides the information needed for a decision.
3	Perform an allowed review action and inspect the result.	Approval and marking paid remain distinct; an empty queue has no request to approve.

13.15 Recognize the landing-page feature cards

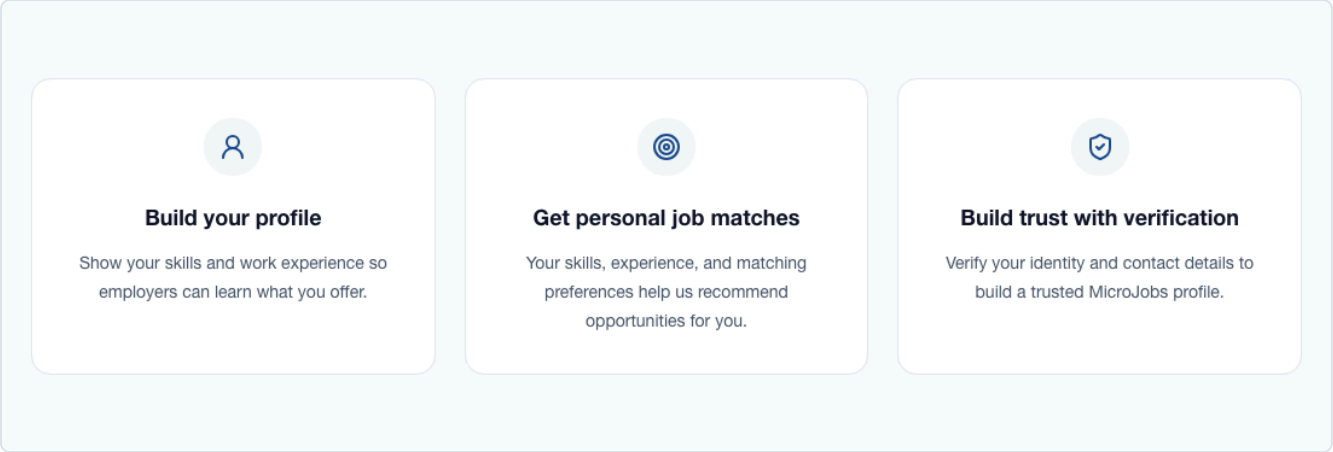

Figure 23. Build your profile, Get personal job matches, and Build trust with verification belong to the landing page.

These cards explain platform features. To carry out the tasks, use the profile, preferences, and verification procedures above. They are informational cards rather than proof that the demonstration account is fully verified.
